

PRODUCT DATA SHEET

SikaSeal®-450 PG

Elastomeric, pourable grade joint sealant

DESCRIPTION

SikaSeal®-450 PG is polysulphide based sealant possessing good resistance to deterioration due to weathering, ozone and UV light.

USES

It is used in horizontal joints in many types of buildings and civil engineering constructions such as:

- Expansion joints in floors
- PQC joints, Precast concrete elements
- Bridge deck joints
- Reservoirs
- Vacuum dewatered floor joints/groove sealing, crack repairing
- Horizontal trafficable joints, airport runways, car park, roads and culverts
- Wherever a permanently flexible horizontal seal is required

FEATURES

- Easy to use
- Economical
- Excellent adhesion with many materials
- Good chemical resistance
- Permanently elastic
- Good weather resistance
- Fuel resistant

CERTIFICATES AND TEST REPORTS

- Complies to ASTM C920: Type M, Grade P, Class 25, Use M, T & NT
- VOC test report (USEPA Method 24)
- VOC Emission Test Report (CDPH)
- Tested acc. to BS 5212-3:1990 - Resistance to fuel immersion of sealant

PRODUCT INFORMATION

Packaging	Ready to mix 5 L packing (Comp. A + Comp. B)
Colour	Grey
Shelf life	12 months from the date of production, if it is stored in undamaged, original, sealed packaging, and if the storage conditions are met.
Storage conditions	SikaSeal®-450 PG shall be stored in dry conditions, where it is protected from direct sunlight and at temperatures between +5 °C and +30 °C.
Density	1.3 kg/l (Comp. A + Comp. B mixed)
Viscosity	Pourable liquid

TECHNICAL INFORMATION

Shore A hardness	~11	(ASTM D2240)
Tensile strength	~0.49 N/mm ²	(ASTM D412)
Movement capability	±25 %	(ASTM C719)
Service temperature	-20 °C min. / +80 °C max.	
Joint design	Joint configuration Minimum Joint width: 6 mm Maximum Joint width: 50 mm Width: Depth Ratio The joint width must be designed to suit the movement capability of the sealant. Joints expected to movement a width to depth ratio of approximately 2 : 1 must be maintained. For butt joint the width to depth ratio should be 1 : 1. Minimum joint depth is recommended: ▪ 6 mm for non-porous surfaces ▪ 8 mm for porous surfaces ▪ 20 mm for trafficked joints and joints that are exposed to hydrostatic pressure At chamfered elements, don't fill the chamfer with sealant.	
Elongation at break	~300 %	(ASTM D412)

APPLICATION INFORMATION

Yield	Joint length [m] per 1 L	Joint width [mm]	Joint depth [mm]
	16	10	6
	8	15	8
	5	20	10
	3	25	12
	2	30	15
These are approx. consumption and may vary based on actual site conditions.			
Ambient air temperature	+5 °C to +45 °C, min. 3 °C above dew point temperature		
Substrate temperature	+5 °C to +45 °C		
Applied product ready for use	Initial cure time for light traffic	Final cure for water immersion	
	~24 h (at 23 °C) ~8 h (at 40 °C)	14 days (at 23 °C) 7 days (at 40 °C)	

BASIS OF PRODUCT DATA

All technical data stated in this Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

FURTHER DOCUMENTATION

- General Method Statement (GMS)

IMPORTANT CONSIDERATIONS

- Sealant joint movement should not exceed $\pm 25\%$ of the joint width when installed in a width to depth ratio of 2 : 1.
- SikaSeal®-450 PG is not chemical resistant to chlorinated solvents, aromatic solvent and diluted oxidizing acids.
- For joints under wet conditions, use Sika® Primer-101.
- Paint compatibility with sealant should be checked prior to painting.
- When using filler boards in expansion joints to achieve the correct depth, it is essential to use a backer rod or insert a bond breaking tape into the joint in order to prevent 3-side adhesion.
- For trafficable joints we recommend to keep recess of 3-4 mm, so that tyre does not get in contact with the sealant's surface.

ECOLOGY, HEALTH AND SAFETY

User must read the most recent corresponding Safety Data Sheets (SDS) before using any products. The SDS provides information and advice on the safe handling, storage and disposal of chemical products and contains physical, ecological, toxicological and other safety-related data.

APPLICATION INSTRUCTIONS

SUBSTRATE PREPARATION

- All surfaces must be clean, dry and free from any loosely adhering particles.
- Check the joints edges for soundness and if found weak cut recess and fill up with suitable repair mortar.
- Correct joint depth can be established by inserting closed cell polyethylene backing rod tightly into the joint.
- When the joints have been filled with fiber filled board, this must be raked back to the required depth. Use bond breaker tape over the backer material.
- Protect surfaces with masking tape.

Concrete and Masonry

- Surfaces must be clean and dry.
- Wire brush thoroughly and remove dust and all contaminants.

Metals

- Remove any corrosion or millscale by grit or shot-blast, wirebrush, grinder or chemical remover.
- De-grease the surfaces with clean cloths soaked in oil-free cleansing solvent.

Priming

- Application of Sika® Primer-101 should not be carried out at temperatures below 5 °C.
- A single coat of primer should be applied by brush in accordance with the instructions on the primer tins.
- Sika® Primer-101 must be allowed to dry to a tack free state before applying SikaSeal®-450 PG.
- SikaSeal®-450 PG should be applied within 3 hours of primer, otherwise repriming will be necessary.

MIXING

- Mix and use one complete unit at a time. Do not subdivide.
- SikaSeal®-450 PG is supplied in separate base and catalyst units.
- Sometimes slight settlement may occur in the catalyst, mix well, before adding to the base component.
- Mix curing agent with base material for 5 - 10 minutes using a suitable paddle fitted to a 500 rpm electric drill moving the paddle completely through the mass of the material. The sides and base of the container should be periodically scraped down with a palette knife to ensure all of the catalyst is completely blended with the base compound.
- Failure to completely disperse catalyst throughout the base compound will result in uncured sealant.
- Once mixed SikaSeal®-450 PG should be used immediately.

APPLICATION

- Where required, protect the surface with masking tape.
- Sealant has a suitable consistency to be poured directly from the container into the joint, when thoroughly mixed.
- For very narrow joints, it should be filled into a sealant gun.
- Any masking tape should be removed immediately after tooling.

CLEANING OF EQUIPMENT

- Application equipment should be cleaned immediately with Sika® Colma Cleaner, acetone or any suitable cleaning solvent after use.
- Hardened / cured material can only be mechanically removed.

Note that as a result of specific local regulations the declared data and recommended uses for this product may vary from country to country. Consult the local Product Data Sheet for exact product data and uses.

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika's recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product's suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.
